k. Description of Request: The licensee requests a temporary variance of the minimum flow requirements of article 33(d) of its project license. The licensee states that the Yuba River watershed conditions are extremely dry, with no indication of changing. Therefore the licensee requests that it be allowed a variance from the fixed and calculated minimum flow requirements of 600 and 673 cubic feet per second (cfs), respectively in the lower Yuba River below Englebright Reservoir so that it may conserve water storage at the upstream Bullards Bar Reservoir. The licensee requests Commission approval to implement the flow variance through March 31, 2014, during which time, it will instead, release 500 cfs to the lower Yuba River. The licensee also requests that the method for determining compliance with article 33 be temporarily modified, such that compliance with the minimum flow requirements be based on 5-day running averages of the applicable daily streamflows, with instantaneous flows never less than 90 percent of the specified requirement.
